Access Control Portal

Project description

Develop and deploy a solution for access control management including software and hardware. The solution will link with the training management software of the Academy and import training schedules with issued QR codes. When scanning a QR code, we check the validity and manage access based on that.

The project will be deployed in 2 phases:

- Phase 1: Manual QR code scan by the security agent at the gate. He will use a handheld scanner and a screen to check the validity of the QR code.
- Phase 2: Use of automated gates to manage access automatically

Deliverables

Phase 1:

Software:

- Access management platform with the following features:
 - o API connection to sync Academy database for training schedules
 - o User interface to scan QR codes and manage access accordingly
 - o Management dashboard with key data and reports with detailed access logs, search and export function and multi user-level access for different locations, regions etc
- Hardware:
 - o Handheld scanner
 - o Mini PC with monitor

Phase 2:

- Software
 - o Integration with automated access gates
- Hardware
 - o Automated access gates
